

Clinical Diagnostic Report (AI-Assisted)

Generated using AI-assisted clinical decision support

Executive Clinical Summary

The AI system suggests a high-risk finding of 'Other Lung Abnormality'. This assessment should be interpreted in conjunction with clinical symptoms, recorded vitals, patient history, and the final judgment of a qualified medical professional.

Patient Information

Patient Name: **Advitya Dua**

Report Date: **31 Jan 2026**

Report ID: 0b8b1a87-2097-4de0-b031-fc75330b3685

Test Type: Pneumonia Detection

AI Analysis (Assistive)

AI-Suggested Finding:

Other Lung Abnormality

AI Risk Stratification:

HIGH

HIGH

Model Confidence:

96.5%

Note: AI outputs are probabilistic and intended to assist—not replace—clinical decision-making.

Clinical Context

Reported Symptoms:

- The patient has pain in chest.

Recorded Vitals:

bp: 127/87

heart_rate: 85

temperature: 38

Generated on: 31 Jan 2026, 17:32

Disclaimer: AI outputs are assistive and must be reviewed by a qualified medical professional.
