

Clinical Diagnostic Report (AI-Assisted)

Generated using AI-assisted clinical decision support

Executive Clinical Summary

The AI system suggests a high-risk finding of 'Other Lung Abnormality'. This assessment should be interpreted in conjunction with clinical symptoms, recorded vitals, patient history, and the final judgment of a qualified medical professional.

Patient Information

Patient Name: **Mock Patient**

Report Date: **30 Jan 2026**

Report ID: 3f1ef1a5-b7cd-48f4-a93a-c97261c25673

Test Type: Pneumonia Detection

AI Analysis (Assistive)

AI-Suggested Finding:

Other Lung Abnormality

AI Risk Stratification:

HIGH

HIGH

Model Confidence:

100.0%

Note: AI outputs are probabilistic and intended to assist—not replace—clinical decision-making.

Clinical Context

Reported Symptoms:

- bahsbdhsab

Recorded Vitals:

bp: 189

heart_rate: 384

temperature: 283

Generated on: 30 Jan 2026, 15:54
